Power tools create sparks which may ignite the dust or fumes. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician to install a polarized outlet. Do not change the plug in any way. Double Insulation Before plugging in the tool, be certain the outlet voltage supplied is within the voltage marked on the nameplate. Do not use "AC only" rated tools with a DC power supply. There is an increased risk of electric shock if your body is grounded. If operating the power tool in damp locations is unavoidable, a Ground Fault Circuit Interrupter must be used to supply the power to your tool. Electrician's rubber gloves and footwear will further enhance your personal safety. Water entering a power tool will increase the risk of electric shock. Do not use tool while tired or under the influence of drugs, alcohol, or medication. A moment of inattention while operating power tools may result in serious personal injury. Contain long hair. Keep your hair, clothing, and gloves away from moving parts. Loose clothes, jewelry, or long hair can be caught in moving parts. Keep handles dry, clean and free from oil and grease. Be sure switch is "OFF" before plugging in. Carrying tools with your finger on the switch or plugging in tools that have the switch "ON" invites accidents. A wrench or a key that is left attached to a rotating part of the tool may result in personal injury. Proper footing and balance enables better control of the tool in unexpected situations. Always wear eye protection. Dust mask, nonskid safety shoes, hard hat, or hearing protection must be used for appropriate conditions. Never use the cord to carry the tools or pull the plug from an outlet. Keep cord away from heat, oil, sharp edges or moving parts. Replace damaged cords immediately. Damaged cords increase the risk of electric shock. Holding the work by hand or against your body is unstable and may lead to loss of control.

The correct tool will do the job better and safer at the rate for which it is designed. Any tool that cannot be controlled with the switch is dangerous and must be repaired. Tools are dangerous in the hands of untrained users. Keep cutting tools sharp and clean. Properly maintained tools, with sharp cutting edges are less likely to bind and are easier to control. Any alteration or modification is a misuse and may result in a dangerous condition. Many accidents are caused by poorly maintained tools. Develop a periodic maintenance schedule for your tool. Accessories that may be suitable for one tool, may become hazardous when used on another tool. Service or maintenance performed by unqualified personnel could result in a risk of injury. For example internal wires may be misplaced

or pinched, safety guard return springs may be improperly mounted. Follow instructions in the Maintenance section of this manual. Certain cleaning agents such as gasoline, carbon tetrachloride, ammonia, etc. Do not drill, fasten or break into existing walls or other blind areas where electrical wiring may exist. If this situation is unavoidable, disconnect all fuses or circuit breakers feeding this worksite. Accidental startups could cause injury. Do not reach under the material being cut. The reciprocating blade holder can pinch your fingers. Bent blade can break easily or cause kickback. Use a dust mask or respirator for applications which generate dust. Never hold it in your hand or across legs. Small or thin material may flex or vibrate with the blade, causing loss of control. Loose adjusting screws and holders can cause the tool or blade to slip and loss of control may result. Accessories may be hot after prolonged use. Some examples of these chemicals are To reduce your exposure to these chemicals work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

Bosch's toolless, Quickchange bladeswapping system ensures effortless blade installation and removal for less downtime and more productivity. A variable speed trigger makes it easy to match cutting speed to a wide variety of applications. Plus, a super handy utility hook offers convenient storage between cuts so you can use both hands for other tasks. The saw comes with one allpurpose blade and a sturdy carrying case. The blade changing system is clunky but requires no additional tools. Would buy again. In the last month I've demolished a bathroom and a laundry room floor with it, and used it to make new cuts in joists, floor plates, etc., and I'm really impressed.

The saw has lots of power, the variable speed trigger is accurate and smooth, quick change blade feature works well, it runs really smooth, and surprisingly the rafter hook feature is a big plus; just pop the hook out and hang it on a joist, instead of looking for a place to lay it down. The scrolling grip collar is fine, and very comfortable to hold, but I usually don't change it very often. The only thing I'd like to see changed on this saw would be an adjustable shoe like some of the Milwaukee's have. I can't imagine how you could get more saw for the money. Most reciprocating saws have a big hump or step at the foregrip so they are awkward and uncomfortable. The RS5 is one of the lighter reciprocating saws at 7.2 lbs. The swiveling foregrip piece is nice and unique. Now the bad news. Power is average. Vibration is average or slightly worse. The foot is not adjustable and sticks out too far. The blade release twist button cannot be operated with gloves, so you have to fiddle around the hot area with bare fingers. Ouch! The cord is short. The trigger operated speed control is nearly useless the proper way to do it is with a separate dial like the Ryobi. For infrequent use, almost any reciprocating saw will do. For extended or pro use, there really isn't a perfect one. I tried them all. Comfort ranks high for me as a builder it also makes it safer, as in good grip and not tired. So I will probably keep the RS5 for everyday comfort and the Milwaukee 6521 for occasional heavy duty use. I would have to say that one of the best features of the Bosch saw is the blade clamp, just turn clockwise and pop in a blade and the spring loaded clamp locks onto it. No more Allen wrench. The saw also features a pivoting shoe and a powerful 9 amp motor along with a nice case with a blade storage compartment. I would rate it 5 stars, but I will rate it a 4 due to the rotating scroll collar. While operating the saw, I noticed the scroll lock button unlocks itself and the collar rotates when I don't want it to.

Except for that it is a great saw that is easy to use and has a lot of nice features. I would recommend it. Surprisingly, they were only a few dollars more than ordering from Amazon. This is a good general purpose reciprocating saw. I needed something as we were taking out a wall and a closet in one of the rooms in our house. Let me say, this worked great! Only draw back is if you accidentally touch any area below the collar, it gets pretty hot. The general purpose blade that it comes with worked great. Sliced easily through drywall, 2x4s, 2x6 headers, and any nail that it encountered. Variable speed trigger worked great, especially when I was putting a new cut into a solid piece of drywall. It does get heavy after extended use when reaching, but at 7 lbs, it's not too bad. Look forward to many many years of using this saw! I always wanted a really good one, and the price of this BOSCH saw was right. This is the kind of tool that you may not use often, but when you need it nothing else will do. The Bosch RS5 won my vote. The price point was good, solid name, and the right features. It's not the lightest saw out there by any means, but it's got plenty of power and good grips. I've used it on two projects so far and have had no issues. These criteria and tests ensure tolerances as well as critical performance characteristics match. Compatibility of the replacement parts to the power tool is assured. The same precision methods and processes that helped the power tool performing to peak potential ensure that each part fits precisely and brings the power tool's performance back to as new condition. Bosch parts continue to be available even after the end of production, so the tool can be kept operational for many years to come. We may already have the answer for your questions. Text us here. Mon-Fri 7001900 CST. On May 10, 2006, Audi confirmed that the A5 would go into production.

For the fourth generation A4 B8, Audi decided to spin off the cabriolet, along with a new coupe and 4 door sportback sedan, into a nameplate of its own as the A5. The A5 adopted design elements of the Nuvolari quattro concept car. The A5 debuted with the 3.2 litre FSI V6 engine delivering 195 kW

265 PS; 261 hp. The Audi S5, in comparison to the A5, features a different fascia as do most Audi S and RS models, including a string of LED daytime running lights around the biXenon headlamps and a vertically striped chrome grille. It is based on Audi A5 Coupe 2.0 TFSI with 155 kW 211 PS; 208 hp engine, but it uses the aluminum Audi Space Frame, aluminum and carbon fiber reinforced plastics body. Punch riveting, bonding or laserMIG hybrid welding replaced spot welding. The vehicle is 110 kg 243 lb lighter than the equivalent steel-bodied production model. Styling packages include a black or matt aluminum look. The stability control system attempts to stop front-end plow before it happens by squeezing the brakes on the inside wheels which effectively drag those tires enough to pull the car into the corner. It includes a 2.0 TFSI engine rated 132 kW 179 PS; 177 hp and 320 Nm 236 lb-ft torque, six-gear manual quattro drivetrain. The new front end includes pronounced air inlets, revamped grilles, and flat fog lights. The vehicle is 10 millimetres 0.39 in longer overall than the predecessor. Production of the RS5 ended permanently in June 2015. A race version of the S5, the RS5 has a valved exhaust whose note can be tuned to suit driving conditions and personal preference. The prototype was built by Audi Sport in Ingolstadt. After retiring in a nearby forest, the ugly car transforms into the new Audi A5, metaphorically becoming the beautiful white swan. The factory option for the A5 is the S line package which consists of a sportier front bumper with an aluminum line, diffuser on the rear bumper, and S line badges on the front fenders and side panel.

They are powered by the same engines as the A5 and S5 Coupe respectively. Inside the S5 has standard front bucket seats with diamond-shaped stitching, and a flat-bottom steering wheel with S badging. It is 60 kg 132 lb lighter than its predecessor. Power is delivered to the quattro system with a 8-speed automatic transmission. It also comes with a honeycomb grille, wider fenders, and aggressively styled front bumper with bigger openings than the A5 and S5. Other options included with a carbon fiber engine cover and ceramic front brakes. Retrieved 2 June 2016. Retrieved 29 October 2013. Retrieved 20151209.
